## Confidentiality Status

This document is Non-Confidential. The right to use, copy and disclose this document may be subject to license restrictions in accordance with the terms of the agreement entered into by Arm and the party that Arm delivered this document to.

Unrestricted Access is an Arm internal classification.

## Product Status

The information in this document is Final, that is for a developed product.

## Feedback

Arm welcomes feedback on this product and its documentation. To provide feedback on the product, create a ticket on <https://support.developer.arm.com>.

To provide feedback on the document, fill the following survey: <https://developer.arm.com/documentation-feedback-survey>.

## Inclusive language commitment

Arm values inclusive communities. Arm recognizes that we and our industry have used language that can be offensive. Arm strives to lead the industry and create change.

This document includes language that can be offensive. We will replace this language in a future issue of this document.

To report offensive language in this document, email [terms@arm.com](mailto:terms@arm.com).

# 1. Introduction

## 1.1 Product revision status

The  $r_xp_y$  identifier indicates the revision status of the product described in this manual, for example,  $r1p2$ , where:

**$r_x$**  Identifies the major revision of the product, for example,  $r1$ .  
 **$p_y$**  Identifies the minor revision or modification status of the product, for example,  $p2$ .

## 1.2 Intended audience

This manual is for system designers, system integrators, and programmers who are designing or programming a *System-on-Chip* (SoC) that uses the Neoverse™ N1 core with the optional Cryptographic Extension.

## 1.3 Conventions

The following subsections describe conventions used in Arm documents.

### Glossary

The Arm® Glossary is a list of terms used in Arm documentation, together with definitions for those terms. The Arm Glossary does not contain terms that are industry standard unless the Arm meaning differs from the generally accepted meaning.

See the Arm Glossary for more information: [developer.arm.com/glossary](https://developer.arm.com/glossary).

Convention	Use
<i>italic</i>	Citations.
<b>bold</b>	Terms in descriptive lists, where appropriate.
monospace	Text that you can enter at the keyboard, such as commands, file and program names, and source code.
monospace <u>underline</u>	A permitted abbreviation for a command or option. You can enter the underlined text instead of the full command or option name.

Convention	Use
<and>	Encloses replaceable terms for assembler syntax where they appear in code or code fragments.  For example:  <pre>MRC p15, 0, &lt;Rd&gt;, &lt;CRn&gt;, &lt;CRm&gt;, &lt;Opcode_2&gt;</pre>
SMALL CAPITALS	Terms that have specific technical meanings as defined in the <i>Arm® Glossary</i> . For example, <b>IMPLEMENTATION DEFINED</b> , <b>IMPLEMENTATION SPECIFIC</b> , <b>UNKNOWN</b> , and <b>UNPREDICTABLE</b> .

Recommendations. Not following these recommendations might lead to system failure or damage.

Requirements for the system. Not following these requirements might result in system failure or damage.

Requirements for the system. Not following these requirements will result in system failure or damage.

An important piece of information that needs your attention.

A useful tip that might make it easier, better or faster to perform a task.

A reminder of something important that relates to the information you are reading.

## Timing diagrams

The following figure explains the components used in timing diagrams. Variations, when they occur, have clear labels. You must not assume any timing information that is not explicit in the diagrams.

Shaded bus and signal areas are undefined, so the bus or signal can assume any value within the shaded area at that time. The actual level is unimportant and does not affect normal operation.

**Figure 1-1: Key to timing diagram conventions**

## Signals

The signal conventions are:

### Signal level

The level of an asserted signal depends on whether the signal is active-HIGH or active-LOW. Asserted means:

- HIGH for active-HIGH signals.
- LOW for active-LOW signals.

### Lowercase n

At the start or end of a signal name, n denotes an active-LOW signal.

## 1.4 Useful resources

This document contains information that is specific to this product. See the following resources for other useful information.

Access to Arm documents depends on their confidentiality:

- Non-Confidential documents are available at [developer.arm.com/documentation](https://developer.arm.com/documentation). Each document link in the following tables goes to the online version of the document.
- Confidential documents are available to licensees only through the product package.

Arm product resources	Document ID	Confidentiality
Arm® Neoverse™ N1 Core Configuration and Sign-off Guide	100617	Confidential
Arm® Neoverse™ N1 Core Technical Reference Manual	100616	Non-Confidential
Arm® Neoverse™ N1 Core Integration Manual	100618	Confidential

Arm architecture and specifications	Document ID	Confidentiality
<i>Arm® Architecture Reference Manual for A-profile architecture</i>	DDI 0487	Non-confidential

Non-Arm resources	Document ID	Organization
Advanced Encryption Standard	197, November 2001	FIPS
Secure Hash Standard (SHS)	180-4, March 2012	FIPS
<i>IEEE Standard for Design and Verification of Low Power Integrated Circuits</i>	IEEE Standard 1801-2009	IEEE <a href="http://www.ieee.org">www.ieee.org</a>

Arm tests its PDFs only in Adobe Acrobat and Acrobat Reader. Arm cannot guarantee the quality of its documents when used with any other PDF reader.

Adobe PDF reader products can be downloaded at <http://www.adobe.com>.

## 2. Functional description

This chapter describes the Neoverse™ N1 core Cryptographic Extension.

### 2.1 About the Cryptographic Extension

The Neoverse™ N1 core Cryptographic Extension supports the Arm®v8-A Cryptographic Extension. Some parts of the Arm®v8-A Cryptographic Extension are optional.

For more information on the optional parts of the Arm®v8-A Cryptographic Extension, see the *AArch64 Instruction Set Attribute Register 0, EL1* register (ID\_AA64ISAR0\_EL1) in the *Arm® Neoverse™ N1 Core Technical Reference Manual*.

The Cryptographic Extension adds new A64, A32, and T32 instructions to Advanced SIMD that accelerate *Advanced Encryption Standard* (AES) encryption and decryption. It also adds instructions to implement the *Secure Hash Algorithm* (SHA) functions SHA-1, SHA-224, and SHA-256.

The optional Cryptographic Extension is not included in the base product. Arm supplies the Cryptographic Extension only under an additional license to the Neoverse™ N1 core.

---

### 2.2 Revisions

This section describes the differences in functionality between product revisions.

<b>r0p0</b>	First release.
<b>r1p0</b>	No functional changes.
<b>r2p0</b>	No functional changes.
<b>r3p0</b>	No functional changes.
<b>r3p1</b>	No functional changes.
<b>r4p0</b>	No functional changes.
<b>r4p1</b>	No functional changes.

## 3. Register descriptions

This chapter describes the Cryptographic Extension registers.

### 3.1 Identifying the Cryptographic instructions implemented

Software can identify the Cryptographic instructions that are implemented by reading two registers.

#### About this task

The two registers are:

- ID\_AA64ISAR0\_EL1 in the AArch64 Execution state
- ID\_ISAR5\_EL1 in the AArch64 Execution state

### 3.2 Disabling the Cryptographic Extension

To disable the Cryptographic Extension, assert the CRYPTODISABLE input signal, which applies to all the Neoverse™ N1 cores present in a cluster. This signal is sampled only during reset of the cores.

#### About this task

When CRYPTODISABLE is asserted:

- Executing a Cryptographic instruction results in an **UNDEFINED** exception.
- The ID registers described in [Table 3-1: Cryptographic Extension register summary](#) on page 11 indicate that the Cryptographic Extension is not implemented.

### 3.3 Register summary

The core has two instruction identification registers. Each register has a specific purpose, usage constraints, configurations, and attributes.

The following table lists the instruction identification registers for the Neoverse™ N1 core Cryptographic Extension.

**Table 3-1: Cryptographic Extension register summary**

Name	Execution state	Description
ID_AA64ISAR0_EL1	AArch64	See <a href="#">3.4 ID_AA64ISAR0_EL1, AArch64 Instruction Set Attribute Register 0, EL1</a> on page 12.
ID_ISAR5_EL1	AArch64	See <a href="#">3.5 ID_ISAR5_EL1, AArch32 Instruction Set Attribute Register 5, EL1</a> on page 14.

## 3.4 ID\_AA64ISAR0\_EL1, AArch64 Instruction Set Attribute Register 0, EL1

The ID\_AA64ISAR0\_EL1 provides information about the instructions that are implemented in AArch64 state, including the instructions provided by the Cryptographic Extension.

### Bit field descriptions

ID\_AA64ISAR0\_EL1 is a 64-bit register.

**Figure 3-1: ID\_AA64ISAR0\_EL1 bit assignments**

#### RES0, [63:48]

RES0 Reserved

#### DP, [47:44]

Indicates whether Dot Product support instructions are implemented.

**0x1** UDOT, SDOT instructions are implemented.

#### RES0, [43:32]

RES0 Reserved

#### RDM, [31:28]

Indicates whether *Rounding Double Multiply* (RDM) instructions are implemented. The value is:

**0x1** SQRDMLAH and SQRDMLSH instructions are implemented.

#### RES0, [27:24]

RES0 Reserved

#### Atomic, [23:20]

Indicates whether atomic instructions are implemented. The value is:

**0x2** LDADD, LDCLR, LDEOR, LDSET, LDSMAX, LDSMIN, LDUMAX, LDUMIN, CAS, CASP, and SWP instructions are implemented.

## CRC32, [19:16]

Indicates whether CRC32 instructions are implemented. The value is:

**0x1** CRC32 instructions are implemented.

## SHA2, [15:12]

Indicates whether SHA2 instructions are implemented. The possible values are:

**0x0** No SHA2 instructions are implemented. This is the value if the core implementation does not include the Cryptographic Extension.

**0x1** SHA256H, SHA256H2, SHA256U0, and SHA256U1 are implemented. This is the value if the core implementation includes the Cryptographic Extension.

## SHA1, [11:8]

Indicates whether SHA1 instructions are implemented. The possible values are:

**0x0** No SHA1 instructions are implemented. This is the value if the core implementation does not include the Cryptographic Extension.

**0x1** SHA1C, SHA1P, SHA1M, SHA1SU0, and SHA1SU1 are implemented. This is the value if the core implementation includes the Cryptographic Extension.

## AES, [7:4]

Indicates whether AES instructions are implemented. The possible values are:

**0x0** No AES instructions implemented. This is the value if the core implementation does not include the Cryptographic Extension.

**0x2** AESE, AESD, AESMC, and AESIMC are implemented, plus PMULL and PMULL2 instructions operating on 64-bit data. This is the value if the core implementation includes the Cryptographic Extension.

## RES0, [3:0]

**RES0** Reserved

## Configurations

ID\_AA64ISAR0\_EL1 is architecturally mapped to external register ID\_AA64ISAR0.

## Usage constraints

### Accessing the ID\_AA64ISAR0\_EL1

To access the ID\_AA64ISAR0\_EL1:

```
MRS <Xt>, ID_AA64ISAR0_EL1 ; Read ID_AA64ISAR0_EL1 into Xt
```

Register access is encoded as follows:

**Table 3-2: ID\_AA64ISAR0\_EL1 access encoding**

op0	op1	CRn	CRm	op2
11	000	0000	0110	000

#### Accessibility

This register is accessible as follows:

EL0	EL1 (NS)	EL1 (S)	EL2	EL3 (SCR.NS = 1)	EL3 (SCR.NS = 0)
-	RO	RO	RO	RO	RO

## 3.5 ID\_ISAR5\_EL1, AArch32 Instruction Set Attribute Register 5, EL1

The AArch64 register ID\_ISAR5\_EL1 provides information about the instructions that are implemented in AArch32 state, including the instructions provided by the optional Cryptographic Extension.

#### Bit-field descriptions

ID\_ISAR5\_EL1 is a 64-bit register.

**Figure 3-2: ID\_ISAR5\_EL1 bit assignments**

#### Reserved, [63:32]

Reserved.

#### RES0, [31:28]

RES0

Reserved

#### RDM, [27:24]

Indicates whether RDM instructions are implemented. The value is:

**0x1** `SQRDMLAH` and `SQRDMLSH` instructions are implemented.

## RES0, [23:20]

**RES0** Reserved

## CRC32, [19:16]

Indicates whether CRC32 instructions are implemented in AArch32 state. The value is:

**0x1** CRC32 instructions are implemented.

## SHA2, [15:12]

Indicates whether SHA2 instructions are implemented in AArch32 state. The possible values are:

**0x0** Cryptographic Extension is not implemented or is disabled.

**0x1** `SHA256H`, `SHA256H2`, `SHA256SU0`, and `SHA256SU1` instructions are implemented.

## SHA1, [11:8]

Indicates whether SHA1 instructions are implemented in AArch32 state. The possible values are:

**0x0** Cryptographic Extension is not implemented or is disabled.

**0x1** `SHA1C`, `SHA1P`, `SHA1M`, `SHA1H`, `SHA1SU0`, and `SHA1SU1` instructions are implemented.

## AES, [7:4]

Indicates whether AES instructions are implemented in AArch32 state. The possible values are:

**0x0** Cryptographic Extension is not implemented or is disabled.

**0x2** `AESE`, `AESD`, `AESMC`, and `AESIMC` are implemented, plus `PMULL` and `PMULL2` instructions operating on 64-bit data.

## SEVL, [3:0]

Indicates whether the `SEVL` instruction is implemented. The value is:

**0x1** `SEVL` implemented to send event local.

## Configurations

This register has no configuration options.

## Usage constraints

### Accessing the ID\_ISAR5\_EL1

To access the ID\_ISAR5\_EL1:

```
MRS <Xt>, ID_ISAR5_EL1 ; Read ID_ISAR5_EL1 into Xt
```

Register access is encoded as follows:

**Table 3-4: ID\_ISAR5\_EL1 access encoding**

op0	op1	CRn	CRm	op2
11	000	0000	0010	101

### Accessibility

This register is accessible as follows:

EL0	EL1 (NS)	EL1 (S)	EL2	EL3 (SCR.NS = 1)	EL3 (SCR.NS = 0)
-	RO	RO	RO	RO	RO

# Appendix A Revisions

This appendix describes the technical changes between released issues of this document.

## A.1 Revisions

This section describes the technical changes between released issues of this document.

**Table A-1: Issue 0000-00**
